

**Your 7 way barrier against ravaging  
Termite's attacking your home**

## JH Termite Barrier (TB) - Your barrier against ravaging termites

Subterranean Termites will find their way into your home if there is no barrier to prevent their concealed entry. Remedial treatments after your home is constructed can be very expensive and invasive to established concrete slabs, paths, driveways and landscaping.

Installing a high quality, JH Termite Barrier with its 50 year warranted management system at the time of construction is your best system against subterranean termites by preventing them from making concealed entry. (warranty terms and conditions apply).

Why is JH TB a barrier unlike any other? JH TB has been developed specifically to cope with the harsh Australian conditions and the aggressive termite species found in Australia that could destroy your home. JH TB protects your home in a combination of 7 ways.

## Termites are a real danger to your home unless you live in Tasmania

- Most areas of Australia are at a Risk of High Risk of subterranean termite attack
- Subterranean Termites attack ONE in THREE homes in Australia
- Subterranean Termite damage to homes is over \$1 billion annually
- Average home subterranean termite treatments cost over \$3000
- Average home repairs from subterranean termite attack cost \$5000
- Replacing your brand new kitchen \$50.000
- Subterranean Termites can attack a new home within 3 months
- Home insurance generally does not cover subterranean termite attack

## Your 7 way barrier against termites to protect your home

- 1, PHYSICAL barrier to block concealed termite entry into your home
- 2, REPELS termites that come near the APVMA Approved chemical barrier
- 3, KILLS termites that come in contact with the APVMA Approved barrier
- 4, DESIGN STRENGTH that meets Termite and Damp Proof Course Approval
- 5, 50 years Warranted Management System against concealed termite entry
- 6, Environmentally Accredited System designed (to protect your family)
- 7, CodeMark Approved technology (with 50 year life expectancy testing)

## 7 Way Barrier against Termites

## What is JH Termite Barrier (TB)?

JH TB is a deltamethrin impregnated geosynthetic blanket laminated top and bottom with a high impact polyethylene membrane. This makes it a powerful chemical and physical termite protection barrier against subterranean termites trying to make a concealed entry into your home.

## What is Deltamethrin?

Deltamethrin is an Eco Specified naturally occurring insecticide belonging to the synthetic pyrethroid class of insecticides. It is well known for its low toxicity and powerful effectiveness against subterranean termites. Because it is contained within the JH TB there is minimum possibility of it affecting the soil or other organisms other than subterranean termites that try to make concealed entry into your home.

## How does it work?

The deltamethrin contained within the JH TB repels and kills subterranean termites when coming into contact with the barrier and your home. The tough physical barrier makes it impossible for termites to penetrate. The barrier has been designed to last for at least 50 years, environmentally sound and gives you the peace of mind because of its reliability and proven technology. It is also classed as a DPC / Vapor Barrier when it is installed under the concrete platform.

## How do I know the JH TB is safe for me and my family?

The JH TB is registered by the Australian Pesticides and Veterinary Medicines Authority (APVMA Approval No: 80846/101770) to be used as a termite barrier. The APVMA registers products that are proven by standard tests to have no carcinogenic, mutagenic, teratogenic, neurotoxic or reproductive effects. The active ingredient to repel and kill subterranean termites is contained within the geosynthetic blanket that is designed to be positioned into the matrix of the building structure of the house, eliminating the potential contact with you, your family and pets.

## JH Termite Barrier (TB) Authorized Installers

Our Authorized Installers are licensed professional pest control operators who have been trained in the biology of subterranean termites.

When you engage a JH TB Installer you can be guaranteed of professionalism, CodeMark Accredited training program and the utmost care in the installation of the barrier. You can enjoy peace of mind knowing the termites face a tested and approved barrier with a life expectancy for at least 50 years.

JH Envirtech warrants that in the unlikely event of termite damage occurring through a breach of the barrier the cost of remedial measures will be borne by the company. It is your responsibility to ensure that the annual inspections, strongly recommended by the Australian Standard AS 3660, are performed. Please contact your JH TB installer for further details.
